

## Details Regarding Bridge Data

The original NBI used can be found at the following link, after pressing “Proceed to Data”:

<https://www.fhwa.dot.gov/bridge/nbi/disclaim.cfm?nbiYear=2025hwybronefiledel&nbiZip=zip>

The NBI has its own data dictionary which can be found here:

<https://www.fhwa.dot.gov/bridge/mtguide.pdf>

The additional columns added to the NBI are all on the leftmost side of the spreadsheet and are described below:

| Bridge Property | Columns              | Explanation                                                                                                 | Example                             |
|-----------------|----------------------|-------------------------------------------------------------------------------------------------------------|-------------------------------------|
| Identification  | Unique Identifier    | The NBI state code followed by the NBI structural number.                                                   | 24 300000BCZ472010                  |
|                 | Structure Name       | The name of the bridge as seen on Google Maps, along with the state the bridge resides in. <sup>12</sup>    | FRANCIS_SCOTT_KEY BRIDGE_(MD)       |
| Position        | NBI Lat, NBI Lon     | The latitude (NBI Lat) and longitude (NBI Lon) contained in the NBI, converted to decimal degrees.          | 39.2097444444445, -76.539475        |
|                 | Start Y, Start X     | The latitude (Start Y) and longitude (Start X) of the first <sup>3</sup> point <sup>4</sup> of the bridge   | 39.212701, -76.533915               |
|                 | End Y, End X         | The latitude (End Y) and longitude (End X) of the second point of the bridge                                | 39.223056, -76.520481               |
| Notes           | Reason for Exclusion | The reason a bridge was manually removed from the list of potentially at risk bridges                       | Unnavigable: Too narrow             |
|                 | Additional Notes     | A space to mark any noteworthy observations during data collection, primarily if two bridges were parallel. | PARALLEL_TO_12 700031_AND_12 700117 |

---

<sup>1</sup>If no name is listed on Google Maps, the name is a combination of the highway it supports followed by the body of water it crosses.

<sup>2</sup>If a bridge crosses two states, both codes are listed. Some bridges cross into Canada, in which case the Canadian state is included

<sup>3</sup>The order of points is arbitrary, e.g. the first point may lie to the left *or* right of the second.

<sup>4</sup>The “edge” of a bridge is the point at which the bridge crosses from covering land to water.
