

Details Regarding Traffic Data

The traffic data for each bridge consists of the AIS broadcasts a ship emitted just before and after crossing. Thus, the number of crossings is half the number of AIS broadcasts. The data processed covers 2015 to 2024. If there isn't data for a period of time, it indicates no ships crossed during that period.

There may be duplicate broadcasts, which indicate a ship crossed twice under a bridge during successive broadcasts. Do not remove duplicate broadcasts.

There are a handful of cases in which a ship crossing may not have been captured:

- The ship does not emit AIS broadcasts.
- The ship followed such a curved trajectory that the linear interpolation between its broadcasts did not intersect the bridge.
- The ship crossed under the bridge as the date changed (e.g. the first broadcast occurred at 23:59:50 and the second occurred at 00:00:10 the next day).

The contents of each broadcast are described below:

Ship Property	Entries	Explanation	Example
Identification	MMSI	Unique 9-Digit ID Number	63602449
	Vessel Name	The name of the vessel	AREQUIPA QUEEN
	IMO	Unique 7 digit number preceeded by 'IMO'	IMO9758765
	Call Sign	Call sign as assigned by FCC	5LSW5
Position	Latitude	(decimal degrees)	39.68576
	Longitude	(decimal degrees)	-75.51953
	BaseDateTime	Time of broadcast	2024-12-31T01:27:10
Velocity	SOG	Vessel speed (knots)	9.793239374
	COG	Instantaneous travel angle (azimuths)	196.5
	Heading	Angle ship is pointing (azimuths)	196
Dimensions	Length	(meters)	183
	Width	(meters)	33
	Draft	The vertical distance from the molded baseline amidships to the waterline (meters)	8
Type	Vessel Type	Integer noting the vessel type	70
	Cargo	Integer noting type of cargo ship carries	70
Miscellaneous	Status	Integer noting navigation status as defined by the COLREGS	0
	Transceiver Class	Class of AIS transceiver	A
